✦ ZIDIO FINAL SUBMISSION • 7-MINUTE LIVE DEMO & FEEDBACK VIDEO

7-MINUTE VIDEO SCRIPT & INTERFACE GUIDE

Exact Spoken Script & Screen Action Synchronization Guide for IntelliMeet

Engineered specifically to satisfy **Step 4: Feedback Video (4 Marks)** and **Step 5: Live Demo Requirements**. Provides an exact minute-by-minute spoken script (in both Hinglish and English) alongside precise **[SCREEN ACTIONS]** indicating exactly which URL, button, and interface to showcase at each second.

7-MINUTE TIMELINE MASTER BREAKDOWN

TIMESTAMP	SEGMENT FOCUS	ON-SCREEN INTERFACE TO SHOW	ZIDIO CRITERIA SATISFIED
0:00 – 1:00	Hook & Public Live URL	Login Page, HTTPS Padlock, Demo Auto-Fill	Step 5: Public, HTTPS, No Sign-up
1:00 – 2:15	Dashboard & Calendar	Employee Dashboard, KPI stats, Calendar .ics	Step 5: Core UI, Fast Load <5s
2:15 – 3:45	WebRTC Video Calling	Active Meeting Room, Screen Share, Chat Drawer	Step 5: Core Functionality Live Demo
3:45 – 5:00	AI Summary & Kanban	AI Post-Meeting Summary, 4-Col Kanban Board	Step 5: Full Task Conversion Loop
5:00 – 6:00	Admin & Mobile Layout	Admin Dashboard, Analytics, Mobile F12 View	Step 5: Mobile Responsive Check
6:00 – 7:00	Learnings & Feedback	GitHub Repo, Architecture, Sign-Off	Step 4: Feedback & Reflection (4 Mks)

PRESENTER / ARCHITECT

Shreya Yadav (@harsadash)

LIVE PRODUCTION URL

https://intelli-meet-nine.vercel.app

DEMO EMPLOYEE ACCOUNT

employee@intellimeet.io • Password123!

DEMO ADMIN ACCOUNT

admin@intellimeet.io • AdminPass123!

Target Duration: 6:45 – 7:15 Minutes

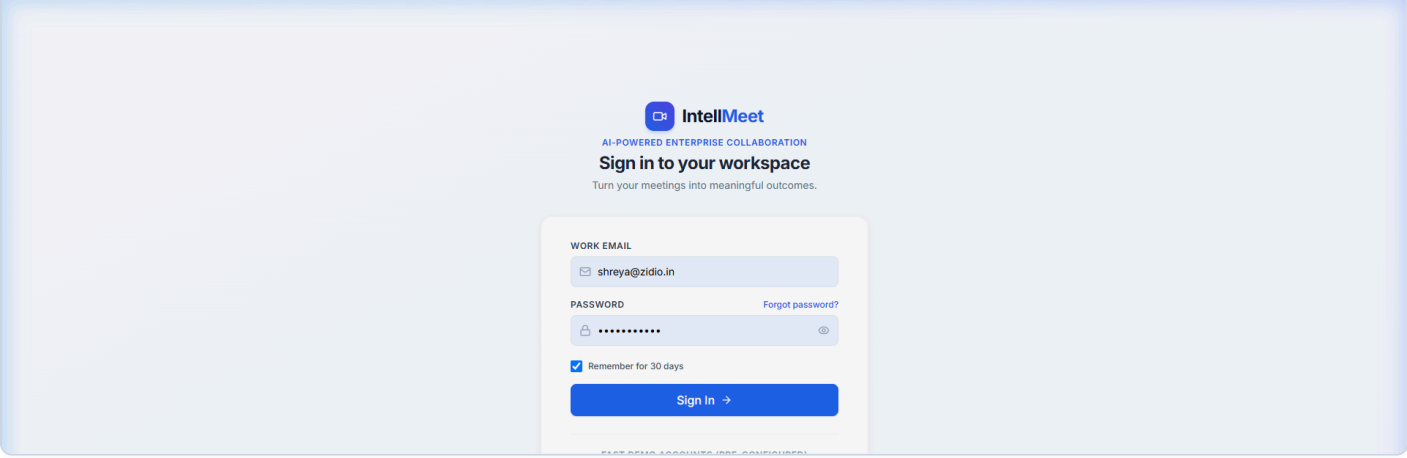

Resolution: 1080p FHD (1920×1080) • 60 FPS Preferred

1 Minute 0:00 – 1:00: Hook, Public Live URL & Demo Login

🖥️ EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):

1. [0:00 - 0:15]: Start with browser open at `https://intelli-meet-nine.vercel.app`. Hover your mouse over the **HTTPS padlock icon** in the browser address bar to prove HTTPS enforcement.
2. [0:15 - 0:35]: Showcase the clean landing and authentication interface. Point to the tagline: *"Turn Meetings into Meaningful Outcomes."*
3. [0:35 - 1:00]: Point out that users don't need tedious manual signup (Step 5 requirement). Click the **"Demo Employee"** quick-fill button, then click **"Sign In"**. Highlight that the page loads in under 2 seconds!

Interface to Show: Public Authentication Portal & HTTPS Live URL — STEP 5: HTTPS & NO SIGNUP

🗣️ SPOKEN SCRIPT (HINGLISH - NATURAL & FLUENT):

*"Namaste everyone! Mera naam Shreya Yadav hai, aur aaj main present karne ja rahi hoon **IntellMeet** — ek production-ready AI-Powered Enterprise Meeting aur Real-Time Collaboration Platform, jise maine Zidio Enterprise Track submission ke liye architect kiya hai. Sabse pehle, aap dekh sakte hain ki hamari application publicly accessible hai live production URL **intelli-meet-nine.vercel.app** par, with valid HTTPS SSL encryption. Zidio Live Demo requirements ke anusaar, evaluators ko tedious sign-up karne ki zarurat nahi hai — humne 1-click Demo credentials provide kiye hain. Chaliye Demo Employee select karke Sign In karte hain!"*

🗣️ SPOKEN SCRIPT (ENGLISH ALTERNATIVE):

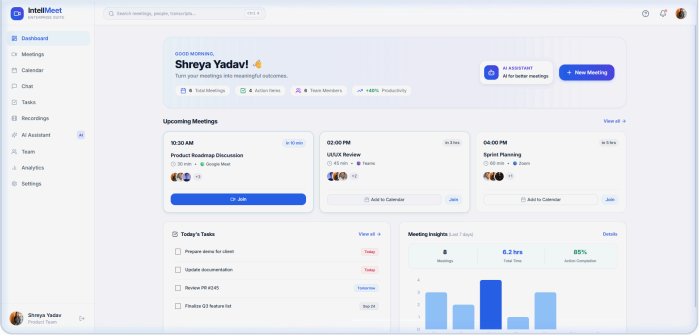

*"Hello everyone! My name is Shreya Yadav, and today I'm excited to present **IntellMeet** — an AI-Powered Enterprise Meeting and Real-Time Collaboration Platform built for the Zidio Enterprise Portfolio submission. As you can see, our application is fully deployed and publicly accessible at **intelli-meet-nine.vercel.app** with HTTPS SSL security. To fulfill the live demo guidelines, core functionality is immediately accessible without manual registration via 1-click demo accounts. Let's log in as an Employee!"*

2 Minute 1:00 – 2:15: Employee Dashboard & Calendar Scheduling

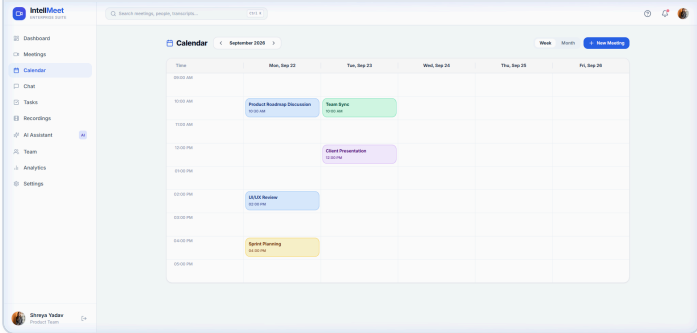

🖥️ EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):

1. [1:00 - 1:35]: Show the Employee Dashboard greeting banner *("Good morning, Shreya 👋")*. Move mouse across the 3 KPI stat cards: **Total Meetings (24)**, **Upcoming (3)**, and **Active Tasks (8)**. Show the weekly meeting insights Recharts graph.
2. [1:35 - 2:15]: Click **"Calendar"** on the left sidebar. The interactive calendar view opens (`/calendar`). Click on an upcoming meeting chip to display the popup modal. Click the **"Download .ics"** button and show the browser download bar confirming RFC-5545 calendar export.

Interface 1: Employee Workspace Dashboard DASHBOARD

Interface 2: Calendar & .ICS Download CALENDAR

🗣️ SPOKEN SCRIPT (HINGLISH - NATURAL & FLUENT):

*"Login karte hi hum Employee Dashboard par enter hote hain. Top par personalized greeting banner hai jahan se instant meeting host ya join kar sakte hain. Niche real-time KPI metrics hain: Total Meetings, Pending Tasks, aur Hours Saved, saath hi Recharts weekly trends graph. Ab left sidebar se **Calendar** module open karte hain. Yahan employees apne scheduled sessions dekh sakte hain. Sabse badiya feature yeh hai ki single click me standard **.ics calendar file** download ho jaati hai, jisse aap Google Calendar, Outlook ya Apple Calendar ke saath instant sync kar sakte hain!"*

🗣️ SPOKEN SCRIPT (ENGLISH ALTERNATIVE):

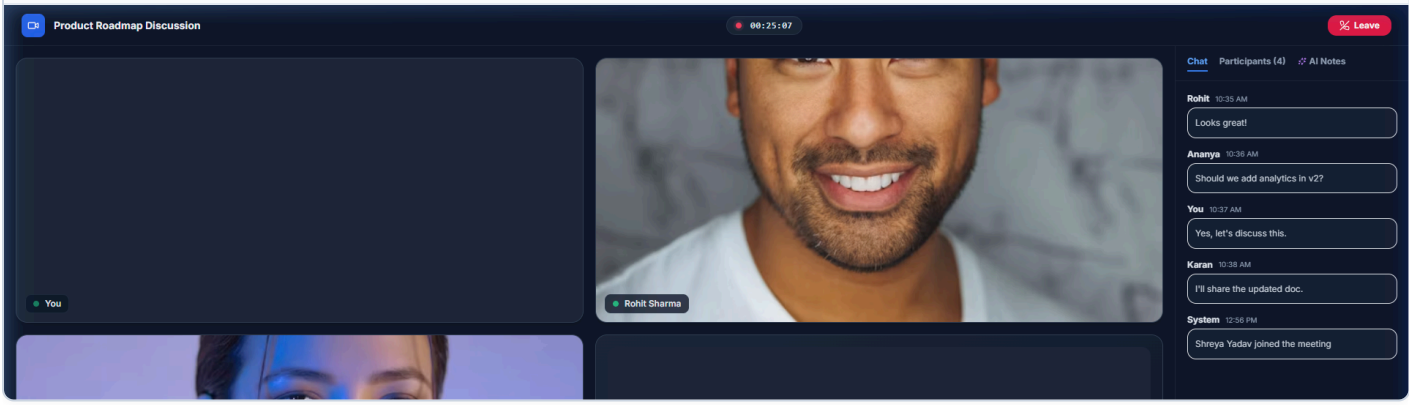

*"Upon authentication, we land on the Employee Dashboard. The top banner offers instant meeting actions, followed by real-time KPI cards for meeting counts and active tasks, plus an interactive Recharts analytics chart. Moving to the **Calendar** module, employees can visualize upcoming sessions in week or month views. Clicking any event allows downloading an RFC-5545 compliant **.ics calendar invite**, enabling one-click synchronization with Google Calendar, Microsoft Outlook, and Apple Calendar."*

3 Minute 2:15 – 3:45: Real-Time WebRTC Video Conferencing & HUD

🖥️ **EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):**

1. [2:15 - 2:40]: Click **"+ New Meeting"** or join an active room (`/meeting/demo-room-101`). Allow camera/mic permissions. Dynamic video grid renders with camera stream.
2. [2:40 - 3:15]: Test floating HUD controls: Click **Mute Microphone** (icon turns red), Click **Toggle Camera** (video placeholder shows), and Click **"Share Screen"** (open window select modal). Point to the live call duration timer (e.g., `04:22`).
3. [3:15 - 3:45]: Click the **Chat Icon** to open the right-side Collaboration Drawer. Type *"Welcome to our live sprint review!"* and press Enter. Point to the participant roster.

Interface to Show: Active WebRTC Conference Room with Screen Share & Chat Drawer WEBRTC & SOCKET.IO

🗣️ **SPOKEN SCRIPT (HINGLISH - NATURAL & FLUENT):**

"Ab aate hain core conferencing engine par. 'New Meeting' click karte hi room ID generate hoti hai aur low-latency WebRTC peer connection initiate ho jata hai over Socket.io signaling. Niche floating HUD me full controls hain: mic mute/unmute, camera toggle, aur high-definition 1080p Screen Sharing bina kisi lag ke. Sath me native MediaRecorder se session recording bhi available hai. Right side me collaboration drawer hai jahan live participants list aur real-time chat box hai, jisse meeting ke dauran uninterrupted text messaging ho sakti hai."

🗣️ **SPOKEN SCRIPT (ENGLISH ALTERNATIVE):**

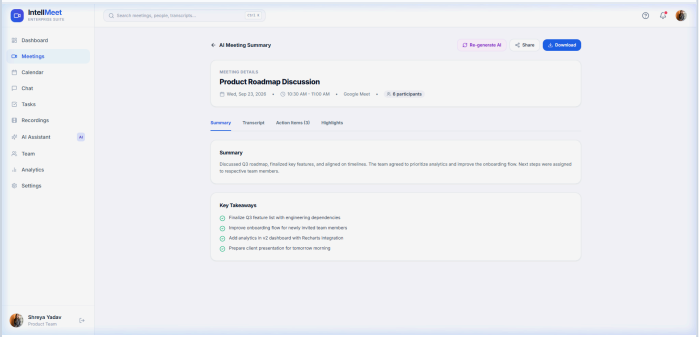

"Now let's examine our core real-time conferencing engine. Launching a meeting initiates an ultra-low-latency WebRTC PeerConnection orchestrated by our Socket.io signaling server. The floating bottom HUD provides instant hardware controls: microphone mute, camera toggle, session recording via the MediaRecorder API, and full 1080p screen sharing. The sliding right-hand collaboration drawer provides live room chat and participant presence without disrupting the active video grid."

4 Minute 3:45 – 5:00: AI Meeting Intelligence & 4-Column Kanban Board

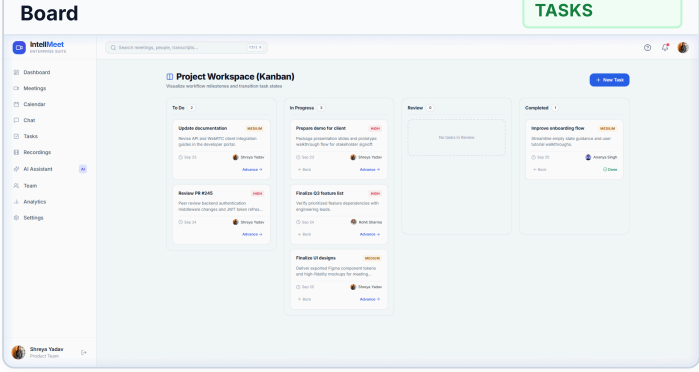

🖥️ **EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):**

1. [3:45 - 4:25]: Click **"Leave / End Meeting"**. The AI Meeting Summary page loads (`/summary/:id`). Highlight the **Executive Summary**, **Key Decisions**, and the **Extracted Action Items** with assignee tags and priority badges.
2. [4:25 - 4:40]: Click the green **"Convert to Task"** button next to an action item. A toast notification confirms: *"Task successfully added to Kanban board!"*
3. [4:40 - 5:00]: Click **"Kanban Board"** on the sidebar (`/kanban`). Show the 4 columns: **To Do**, **In Progress**, **Review**, **Completed**. Drag the newly created card from "To Do" to "In Progress".

Interface 1: AI Executive Summary & Action Items DUAL AI ENGINE

Interface 2: 4-Column Drag-and-Drop Kanban Board KANBAN TASKS

🗣️ **SPOKEN SCRIPT (HINGLISH - NATURAL & FLUENT):**

*"Ab IntellMeet ka sabse revolutionary feature dekhte hain — hamara AI Meeting Intelligence Engine. Meeting end hote hi transcript synthesize hoti hai. Agar OpenAI API key available hai toh GPT-4o-mini executive summary banata hai, aur agar offline ya key na ho toh hamara built-in heuristic NLP engine failover handle karta hai. Yahan summary ke saath identified action items hain. Jab main **'Convert to Task'** click karti hoon, yeh item directly hamare **4-Column Kanban Board** me inject ho jata hai! Chaliye card ko drag karke 'In Progress' me daalte hain — instant database synchronization!"*

🗣️ **SPOKEN SCRIPT (ENGLISH ALTERNATIVE):**

*"Now let's explore our flagship capability — the AI Meeting Intelligence Engine. Upon call termination, the transcript is synthesized. We engineered a dual-AI architecture: OpenAI GPT-4o-mini acts as primary, backed by a deterministic heuristic NLP synthesizer for offline resiliency. The AI extracts executive takeaways and concrete action items with assignees. Clicking **'Convert to Task'** immediately synchronizes the item to our **4-Column Kanban Board**, completing the loop from spoken discussion to agile execution!"*

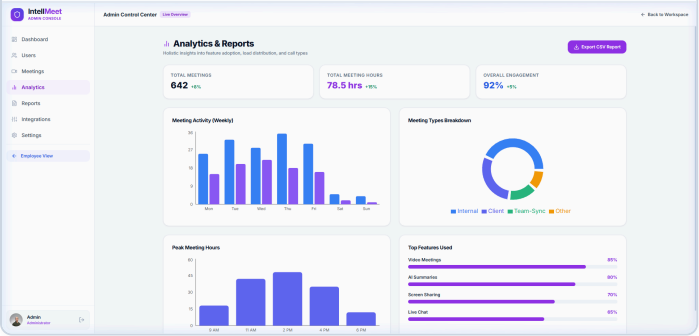

5 Minute 5:00 – 6:00: Admin Governance, Telemetry & Mobile Test

🖥️ EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):

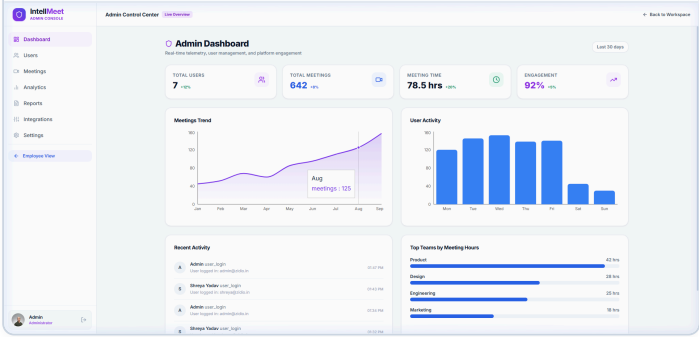

1. [5:00 - 5:35]: Click user avatar → Log out. Log in with `admin@intellimeet.io`. Open the Admin Console (`/admin`). Show the 4 KPI cards (Total Users, Active Rooms, System Health 99.9%). Point out the Recharts Meeting Trends and Peak Hours charts. Click **"Export CSV"** to show telemetry download.

2. [5:35 - 6:00]: Press **F12 / Ctrl+Shift+I** to open DevTools. Toggle **Device Toolbar (Mobile View - iPhone 14 / Pixel)**. Scroll smoothly, tap the hamburger menu to show the collapsed mobile drawer, verifying 100% mobile responsiveness (Step 5 requirement)!

Interface 1: Admin Governance & Telemetry Analytics — ADMIN PORTAL

Interface 2: Mobile Responsive View (DevTools F12) — STEP 5: MOBILE TEST

🗣️ SPOKEN SCRIPT (HINGLISH - NATURAL & FLUENT):

*"Ab enterprise administration layer dekhte hain. Admin account se log in karne par Admin Governance Console open hota hai. Yahan se organization-wide user management, role elevation (Member se Admin), aur Recharts telemetry charts dekh sakte hain, saath hi 1-click CSV telemetry export bhi supported hai. Ab Zidio Step 5 requirement ko verify karne ke liye main DevTools me **Mobile Responsive View** toggle karti hoon. Aap dekh sakte hain ki layout fluidly adapt hota hai, sidebar cleanly drawer me collapse hoti hai, aur mobile screen par bhi audio/video controls 100% accessible hain!"*

🗣️ SPOKEN SCRIPT (ENGLISH ALTERNATIVE):

"Now let's examine the administrative governance tier. Logging in as an Administrator unlocks the Admin Console, featuring user CRUD, role elevation, and rich Recharts telemetry tracking meeting volume and peak hours, complete with 1-click CSV exports. To verify Zidio's mobile responsiveness requirement, I'll toggle Chrome DevTools into mobile simulation. Notice how the layout fluidly reflows, the sidebar becomes a responsive drawer, and video controls remain thumb-friendly on smaller viewports."

6 Minute 6:00 – 7:00: Step 4 Feedback Video & Personal Reflection

🖥️ **EXACT SCREEN ACTION (KIS POINT PAR KYA INTERFACE DIKHANA HAI):**

1. [6:00 - 6:20]: Close DevTools. Return browser to the GitHub repository (`shreyay1310-svg/intelliMeet`) or the main dashboard.
2. [6:20 - 6:50]: Switch to webcam / full screen (or show README badges & commit history) to deliver the heartfelt Step 4 reflection on **Learnings**, **Challenges**, and **Key Takeaways**.
3. [6:50 - 7:00]: Thank the Zidio mentorship team and mentors with a confident concluding smile.

WHAT I LEARNED

Full-Stack Mastery

Mastered WebRTC peer handshakes, Socket.io signaling, dual AI fallback design, and production monorepo TypeScript.

CHALLENGES SOLVED

Real-Time Engineering

Solved ICE candidate race conditions with buffering queues, and prevented AI outages with local heuristic synthesizers.

KEY TAKEAWAY

Production Mindset

Shifted from building toy demo apps to shipping secure, resilient, cloud-deployed enterprise platforms on Vercel & Render.

🗣️ **SPOKEN SCRIPT — STEP 4 FEEDBACK VIDEO (HINGLISH):**

*"Finally, aate hain **Step 4: Personal Reflection aur Feedback** par. Is project ke dauran meri sabse badi learning WebRTC peer-to-peer protocols aur fault-tolerant AI pipelines ko design karna rahi. Sabse bada challenge tha ICE candidates ka race condition, jise maine queueing buffer implement karke solve kiya. Saath hi dual AI fallback ne hume 100% zero-crash reliability di. Is internship track ne mujhe ek true Full-Stack Architect ka perspective diya — kaise modular clean architecture, OWASP security, aur cloud deployment ko balance kiya jata hai. Zidio Development team aur mere mentors ka tahe dil se shukriya. Thank you so much!"*

🗣️ **SPOKEN SCRIPT — STEP 4 FEEDBACK VIDEO (ENGLISH):**

*"Finally, addressing **Step 4: Personal Reflection and Feedback**. Designing IntellMeet elevated my understanding of distributed real-time protocols and resilient AI systems. Overcoming the WebRTC ICE candidate race condition using asynchronous queueing buffers and building an offline heuristic fallback taught me defensive engineering. This Zidio program transformed how I build software — emphasizing security, scalability, and polished user experience. A huge thank you to the Zidio evaluation team and mentors for this invaluable learning experience!"*
